```

The flowchart illustrates a process for creating personalized postcards. It begins with a first consumer at a kiosk (200) indicating a desire for an image-bearing product. The kiosk generates a unique ID (202). The first consumer then provides the name and address of a second consumer, along with their own name and address (204). This information, along with the unique ID, is sent to a server (206). The server then sends the unique ID, the second consumer's name, and address to a postcard printer (208). The first postcard is then sent to the second consumer (210). The second consumer goes to a networked kiosk (212) and inputs the unique ID (214). They then input at least one image (216). The unique ID is sent to the server (218), which then sends the unique ID, the first consumer's name, and address to a postcard printer (220). Finally, the second postcard is sent to the first consumer (222), and the process ends at STEP 224.
